Whiskey, Bourbon & Scotch Barrel Bungs

Click image to enlarge

Barrel bungs are stoppers used for closing whiskey, bourbon or scotch barrels. Ace Seal's unique design allows a tight seal, while also being easy to remove.

Made from silicone, the bourbon barrel bungs from Ace Seal are FDA-approved and provide the durability and ease of use that your distillery applications need.

Features of Whiskey Barrel Stoppers

Our whiskey barrel bungs are easy to hammer in, but still fit snug inside the barrel, preventing any leaks. They are designed with a lip that creates a tight seal and prevents the bung from falling inside, even as the bourbon barrels are rolled around.

Our bourbon barrel bungs also provide:

- Malleability
- Durability
- Custom colors and sizes
- A wide range of style options

Solid Whiskey Barrel Bungs & Stoppers with Top Grip Lip

Standard & Custom Whiskey Bungs

Ace Seal offers stock bungs in standard U.S./French size (55mm top x 44mm base x 48mm height); custom whiskey barrel bungs are available in nearly any size your project may require. “Natural” (translucent white) color is standard, but we can provide solid bungs in custom colors and/or with custom printing to meet your unique needs.

Solid Whiskey Barrel Stopper Features

- Manufactured from FDA-approved food grade silicone

- Top grip lip for improved ease of use and even better sealing
- Available in stock U.S./French size or custom sizes
- Natural color standard; custom colors available

We also offer solid whisky barrel bungs without top grip lip, hollow whiskey barrel bungs with or without top grip lip, and whiskey barrel bungs with 3/8” thru-holes.

What is Silicone & Why is It Used for Whiskey Stoppers?

“Silicone” is the general name for a family of polymers that includes any synthetic compound consisting of repeating units of siloxane. The most common form of silicone is silicone rubber, which is popular for a wide range of applications. Generally, silicone rubber is non-reactive, stable, resistant to fungal growth, and can be used in harsh environments and extreme temperatures (-75° to 450°F/-60° to 232°C) without losing its useful properties. Silicone maintains its dimensional tolerances at high temps, and won’t become brittle in subzero conditions.

Silicone rubber’s chemical and mechanical properties, along with the ease with which it can be molded, make it an ideal material for whiskey barrel stoppers. Ace Seal uses special, FDA-approved, food grade silicone for all our barrel bungs.

Hollow Whiskey Barrel Bung with Top Grip Lip

[100-0037-001]

Click image to enlarge

Hollow whiskey barrel bungs are hollow in the center, making them lighter, more flexible, and easier to install in challenging applications. The special “top grip lip” makes installation and removal even easier and extends past the sides of the barrel opening for a more secure seal. Our hollow whiskey barrel stoppers are manufactured from FDA grade/food grade silicone for safe sealing with high reliability.

Standard & Custom Hollow Whiskey Bungs

Our hollow silicone bungs are available in stock U.S./French size (55mm top x 44mm base x 48mm height, with 25.4mm hole width and 35.5mm hole depth). We can provide custom hollow whiskey barrel bungs in nearly any size you may need. “Natural” color (translucent white) is standard, but we can manufacture bungs in custom colors and/or with custom printing to meet your specifications.

Hollow Whiskey Barrel Stopper Features

- Precision molded from FDA-approved food grade silicone
- Top grip lip for improved ease of use and even better sealing
- Available in stock U.S./French size or custom sizes
- Natural color standard; custom colors available

We also offer hollow whiskey barrel bungs without top grip lip, solid whiskey barrel bungs with or without top grip lip, and whiskey barrel bungs with 3/8” thru-holes.

What is Silicone & Why is It Used for Bungs?

“Silicone” is the general name for a family of polymer materials; it includes any synthetic compound consisting of repeating units of siloxane. Silicone rubber is the most common form of silicone. Widely used in a broad range of applications, silicone rubber is non-reactive, stable, and resistant to fungal growth. It can be used in harsh environments and extreme temperatures (-75° to 450°F/-60° to 232°C) without losing its useful properties—silicone rubber doesn’t become brittle in subzero conditions, and maintains its dimensional tolerances at high temps.

Its chemical and mechanical properties, and the ease with which it can be manufactured and molded, make silicone rubber an ideal material for whiskey barrel bungs. Ace Seal uses special, FDA-approved, food grade silicone for all our barrel bungs.

Whiskey Bung - Standard Bungs & Stoppers with 3/8 Thru Hole

[100-0010-001]

Click image to enlarge

Standard silicone whiskey barrel bungs with precision-molded 3/8” thru holes. These through holes are ideal for airlock devices/airlock functions and allow for the insertion of tubes or other implements, as needed. They also feature a special “top grip lip” that makes installation and removal easy and that extends past the sides of the opening for a more secure seal. Our thru hole barrel stoppers are manufactured from FDA grade/food grade silicone for safe and reliable sealing.

Standard & Custom Thru Hole Whiskey Bungs

We offer through-hole whiskey barrel bungs in stock U.S./French size (55mm top x 44mm base x 48mm height), and in custom sizes to meet your unique needs. Standard thru-hole bungs are “natural” color (translucent white) but can be manufactured in custom colors and/or with custom printing, as needed.

Through Hole Whiskey Barrel Stopper Features

- Molded from FDA-approved food grade silicone
- 3/8” through hole for airlock device
- Available in stock U.S./French size or in custom sizes
- Natural color is standard; custom colors available

We also offer solid whiskey barrel bungs [with](#) or [without](#) top grip lip and hollow whiskey barrel bungs [with](#) or [without](#) top grip lip.

What is Silicone & Why is It Used for Bungs?

“Silicone” is the general name for a large family of polymers, including any synthetic compound consisting of repeating units of siloxane. Silicone’s most common form, silicone rubber, is utilized in a broad range of applications. This material is non-reactive, stable, resistant to fungal growth, and is well-suited to use in harsh environments and extreme temperatures (-75° to

450°F/-60° to 232°C). Silicone rubber maintains its dimensional tolerances at high temps and doesn't become brittle in subzero conditions.

Thanks to its beneficial chemical and mechanical properties, and the ease with which it can be manufactured and molded, silicon rubber is an ideal material for whiskey barrel stoppers. Ace Seal uses special, FDA-approved food grade silicone for all our barrel bungs.

Why Choose Silicone Bourbon Barrel Bungs?

Our whiskey barrel bungs are made from silicone, instead of the traditional wood. By using silicone, our stoppers are not only easy to remove, but they can be reused over and over without any loss in sealing power. Silicone is also a non-reactive, stable material, so our stoppers can withstand the high levels of ABV that bourbon and other whiskeys can reach during maturation.

Custom and Standard Whiskey Barrel Bungs from Ace Seal

Our standard bourbon barrel bungs are manufactured in a translucent white color, but we also offer custom sizes, colors, and printed designs, depending on your application. We also provide a variety of styles to meet your sealing needs.

Our whiskey barrel bung options include:
